

T-Rex

By Louis

Final

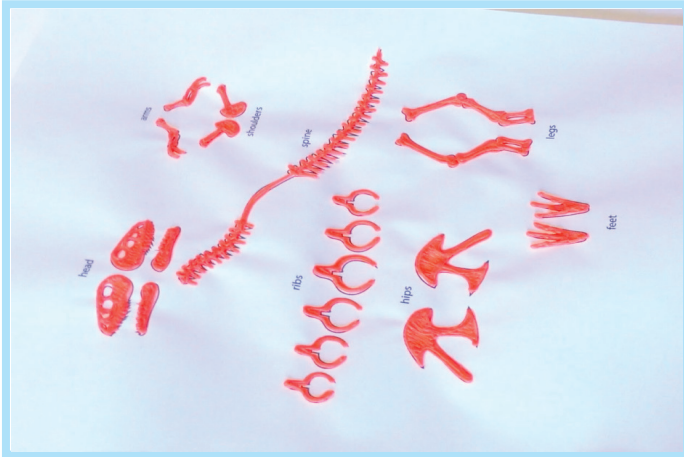

Using this stencil you can create your very own Tyrannosaurus Rex skeleton. Fill in all the pieces and then put them together piece by piece just like a real paleontologist!

T-Rex

By Louis

Step 1

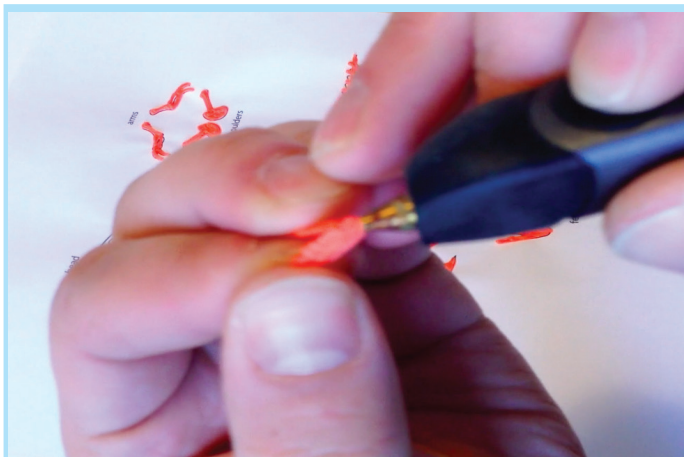

Print out the stencil and trace the pieces. If the pieces are too flimsy go back over them.

Step 2

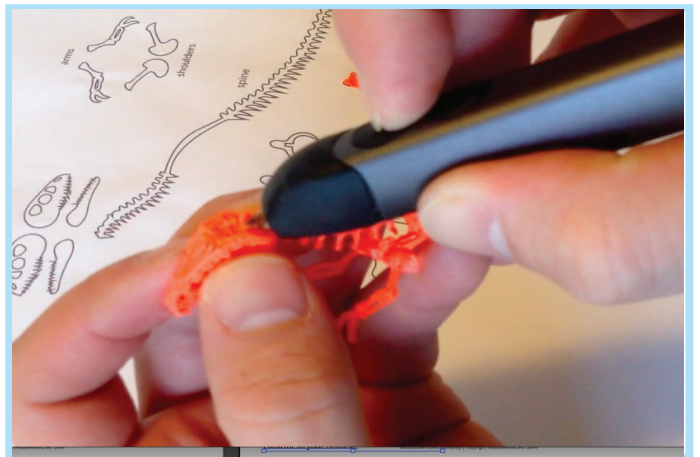

Start with the two halves of the head, attach them at the nose. Keep the backs of the head separate.

Step 3

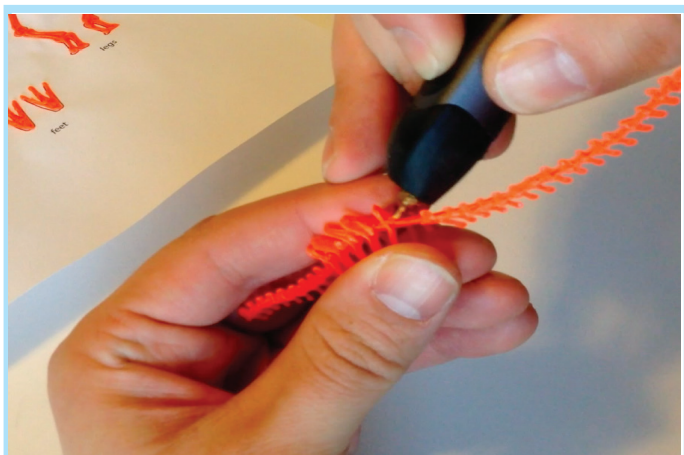

Assemble the lower jaw the same way, connecting at the tip. Now attach the lower jaw to the skull.

Step 4

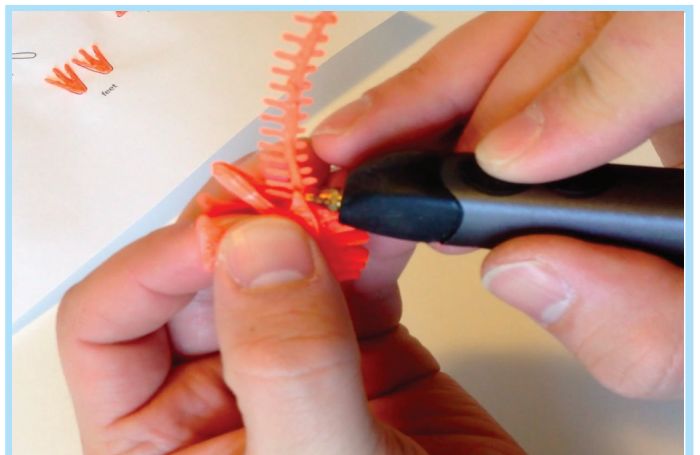

Attach the skull to the spine.

Step 5

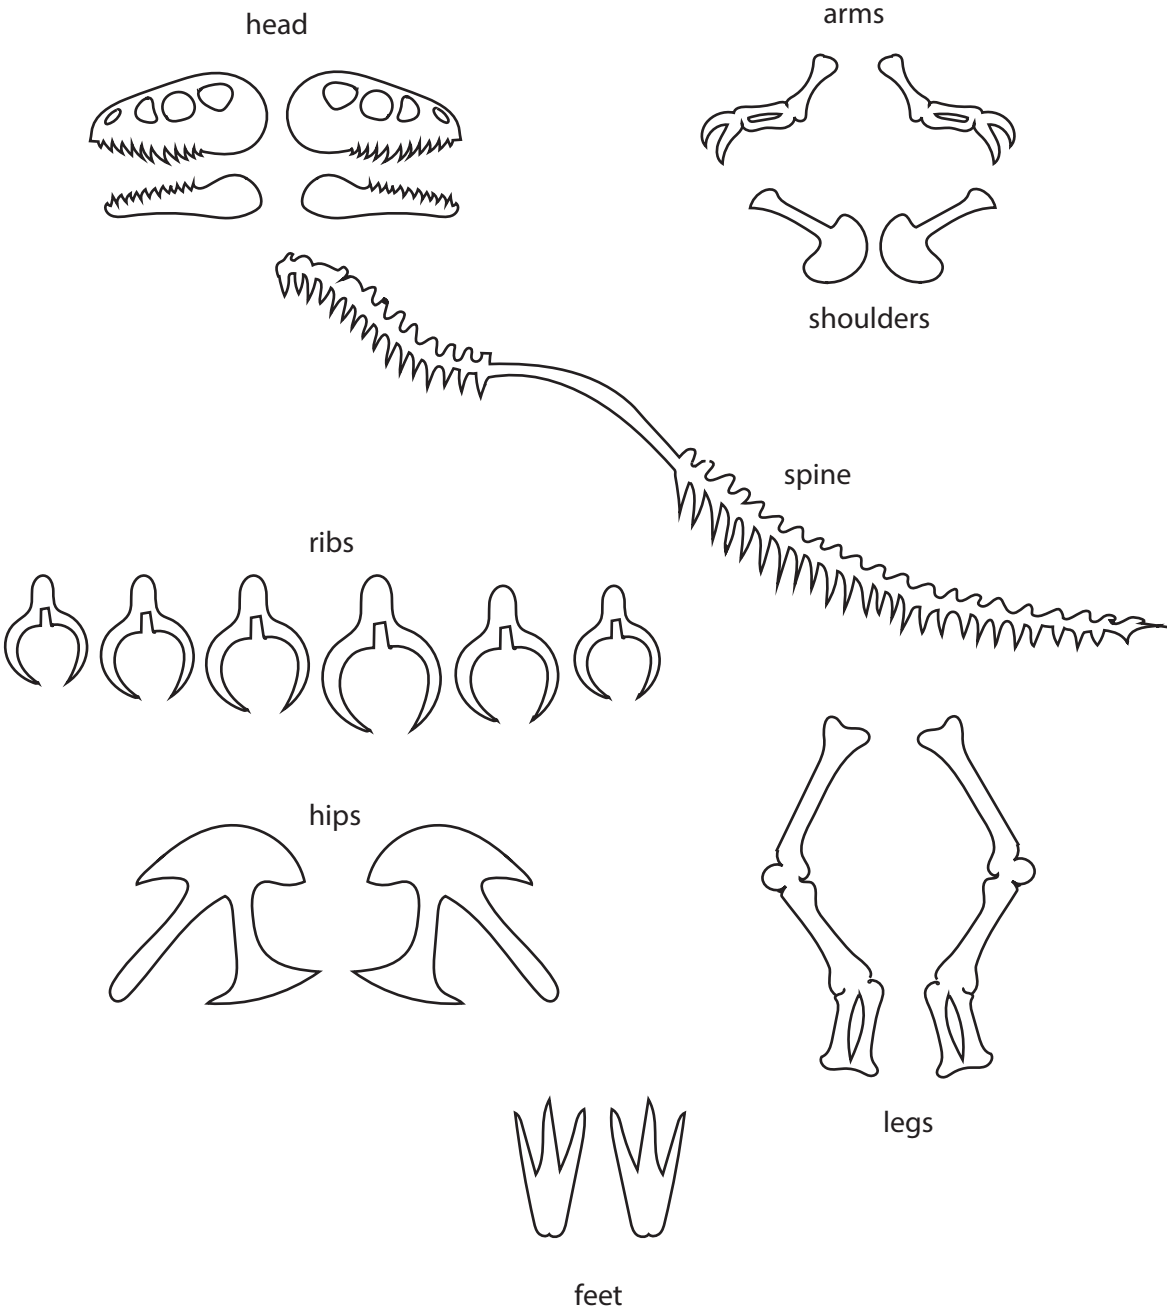

Next, attach the ribs to the spine going from small to big to small.

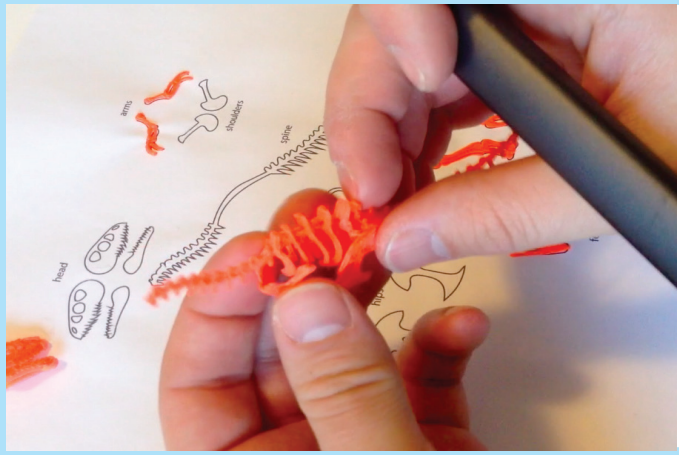

Step 6

Now attach the hips to the spine and ribs. then connect the pelvic bones.

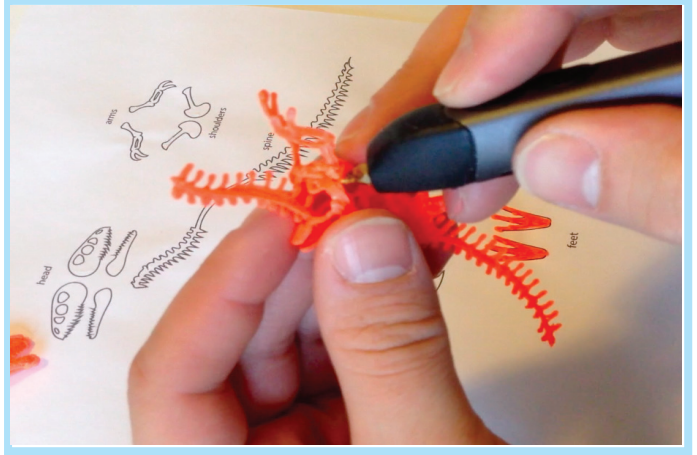

Step 7

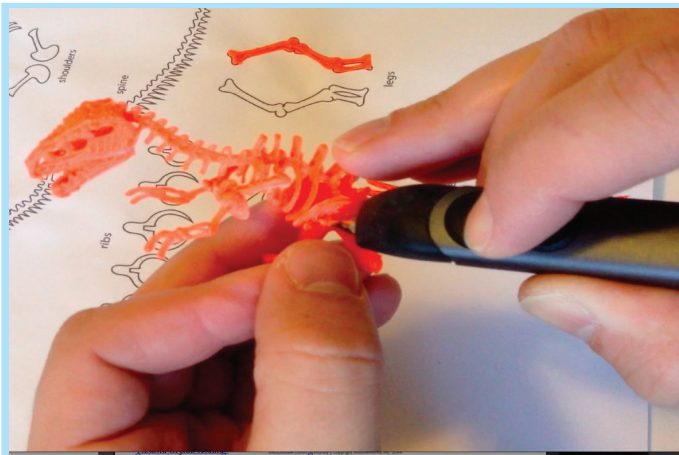

Attach the shoulders to either side of the ribs near the neck.

Step 8

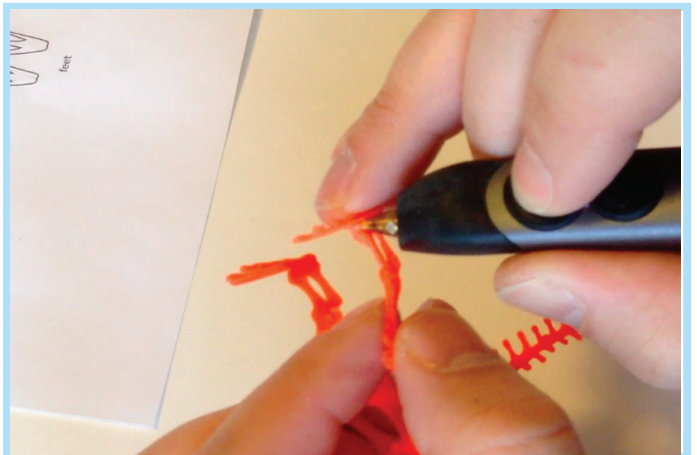

Next, attach the arms to the shoulder blades.

Step 9

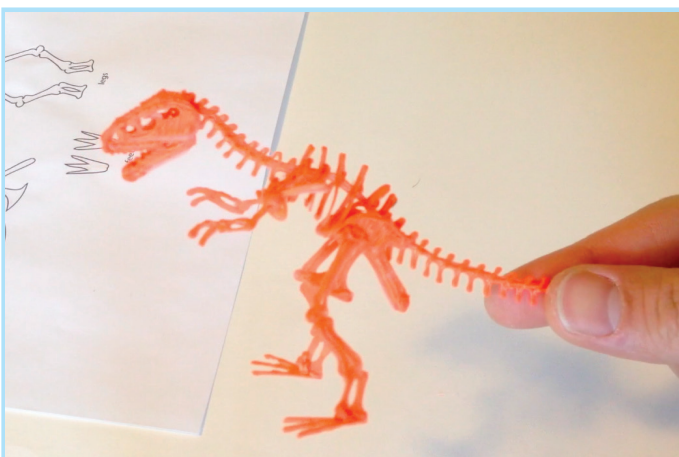

Now attach the legs to the hips. Make sure they're evenly spaced.

Step 10

Finally, attach the feet making sure when you secure them in place the T-Rex will be balanced to stand up.

Done!

A few more of these and you can add museum curator to your resume!
