

Stencil:

Steps

Plastic: PLA only

- 1 strand (or less) of:
clearly stormy, clearly pink,
clearly blue, gangsta gold,
blue steel and tuxedo black
- 4 strands of clearly clear
- 2 strands of purple and brownie brown

further equipment

1: first layer: fill in the main colours (really purple for the big one and brownie brown for the small butterflies) and insert the eyepin as shown

2: first layer completed!

3: second layer: black details

4: third layer: metallic details

5: fourth layer: translucent parts (many layers more possible)

6: fifth and last layer: clearly clear on top of everything

7: curl in the straight parts of the eyepins used on the small butterflies

8: repeat all the steps for each butterfly

9: put all your pieces on aluminium foil

10: now it's baking time: 12 minutes at 160°C at the middle slide of your oven should do it...

11: watch the PLA melt and become glossy!

12: get your pieces out of the oven carefully and let them cool a couple of minutes before peeling them off; then add the antlers

13: time to assemble your necklace: connect the butterflies using the split rings

14: this is how you fix the wire into the clamping fasteners; after completing this step, connect all pieces (butterflies, clamping fasteners, clasp) with split rings

15: your finished necklace! If you like, you can retrace the butterfly again in its smaller version and pull the wire through its wings.

Final
